

MASTERCRAFT[®]

WARP TEST

Please check your door for warp. Take a string and wrap it around the door from top to bottom. If the door is warped, it will show up as a gap between the face of the door and the string. If there is no gap, the lock and hinge side jambs may not be parallel and will need to be adjusted. See back side to check plumb of door.

Not Warped

MASTERCRAFT[®]

PLUMB TEST

A door that is plumb will show an even space between the door and the lock frame from top to bottom as the door is being opened as viewed from the inside. If the gap is uneven, the hinge side and lock side frames are not parallel. The lock side or hinge side frame will need to be adjusted to make the space between the door and frame equal top and bottom.
